SATAjet® 100 B™
Primer. Filler. Spray Putty.

SATAjet 100 B – Unmatched for the Application of Primer Materials

Undercoat materials such as **primer, sealer, filler and spray putty** fulfill an important function within the paint process. Therefore, particular attention must be paid to the application of these materials, using a dedicated primer gun.

The wide nozzle range of the SATAjet 100 B allows to apply all sorts of undercoat materials. The fine atomization and wide spray fan of the SATAjet 100 B help achieve **even material distribution**, saving expensive labor time due to the reduced time in sanding.

The SATAjet 100 B F RP is an extremely versatile spray gun allowing to adjust the atomization pressure easily. From spot repair to large surfaces – starting from a **gun inlet pressure of 7.25 psi**, this primer gun can be adjusted in a way which allows to repair even small areas economically with extremely low over spray. The 1.1 RP is an excellent choice for the spraying UV primer.

SATAjet® 100 B & 1000 B Maintenance Set #1173260

- Air distribution ring/extraction tool 143230
- 1 Sealing ring for air cap ring 130393
- 1 Sealing element for fluid tip 140582
- 1 Air piston rod 91959
- 1 Seal retainer 133942
- 1 Spindle seal 133934
- 1 Teflon seal for air piston 133991
- 1 Paint needle packing 15438

The appropriate solution for every professional

According to his technique, the object and the material, the painter has the choice between the “Super Saver” SATAjet 100 B F HVLP and the “Super Speed” SATAjet 100 B F RP. Both versions (HVLP low pressure and RP optimized high pressure/compliant technology) achieve transfer rates exceeding 65%.

Both guns lend themselves perfectly for the application of waterborne as well as solvent-based primer and sealer materials.

The **SATAjet 100 B P** is specially designed for the application of polyester spray putty/filler and is indispensable for creating high film builds along with a sharp-edged fan. The SATAjet 100 B P is excellent choice for spraying large flake.
